

Homework

Encrypt the first three letters of your first name in uppercase letter

ENCRYPTION TYPE: RSA

PUBLIC KEY: $n = 187$, $e = 3$ (to encrypt)

PRIVATE KEY: $p = 11$, $q = 17$, $d = 107$ (to decrypt)

*Background information: $pxq = n$ ($11 \times 17 = 187$)

p , q - chosen prime numbers, the bigger the better, more secure

e - chosen prime number

m - message to encrypt in corresponding ASCII code

c - ciphered text ($m^e \bmod n$)

ASCII Table:

A	B	C	D	E	F	G	H	I	J	K	L	M
65	66	67	68	69	70	71	72	73	74	75	76	77
N	O	P	Q	R	S	T	U	V	W	X	Y	Z
78	79	80	81	82	83	84	85	86	87	88	89	90

ENCRYPTION

Instructions	Example: H	First Letter: [letter]	Second Letter: [letter]	Third Letter: [letter]	
1. Find the corresponding ASCII code to your letter	72	76 (L)	73 (I)	65 (A)	77 (M)
2. Calculate m^e	$72^3 =$ 373248	438976	389017	274625	456533
3. Find $c = m^e \bmod n$	$373248 \bmod 187 =$ 183	87	57	109	66
4. Your ciphered letter (c value)	183	87	57	109	66

DECRYPTION

Instructions	Example: 183	Ciphered letter: 77	Ciphered letter: 166	Ciphered letter: 137
1. Calculate $m = c^d \bmod n$	$m = c^d \bmod n =$ $183^{107} \bmod 187 =$ 72	$77^{107} \bmod 187 =$ 66	$166^{107} \bmod 187 =$ 89	$137^{107} \bmod 187 =$ 69
2. Convert m to letter based on ASCII table	72 = H	66 = B	89 = Y	69 = E

Use <https://www.wolframalpha.com/> to calculate modulo mathematics and huge exponents

Extension: Encrypt your full first name (add columns to the table above - right click on the table and choose "insert column right" option)

Use this code to check your work in the Homework above for Encryption ONLY:

```
import math

message = input("Enter the letter to be encrypted: ")
ascii_code = ord(message)

p = 11 #private key
q = 17 #private key
e = 3  #public key

n = p*q #public key

#Encryption, c = m^e mod n
def encrypt(msg):
    m_power_e = math.pow(msg,e) #calculates m to the power of e
    c = m_power_e % n #find modulo to get the ciphered text
    print("Encrypted Message is: ", c)
    return c

print("ASCII Code is: ", ascii_code)
c = encrypt(ascii_code)
```

https://github.com/hunter-teacher-cert/work-topics-leungbenson/blob/master/public_key/RSA.md

ASYNCH:

Find another type of encryption and give a brief summary of how it works. Post on Slack and comment on one other person's post.
